

Four oceans to sail

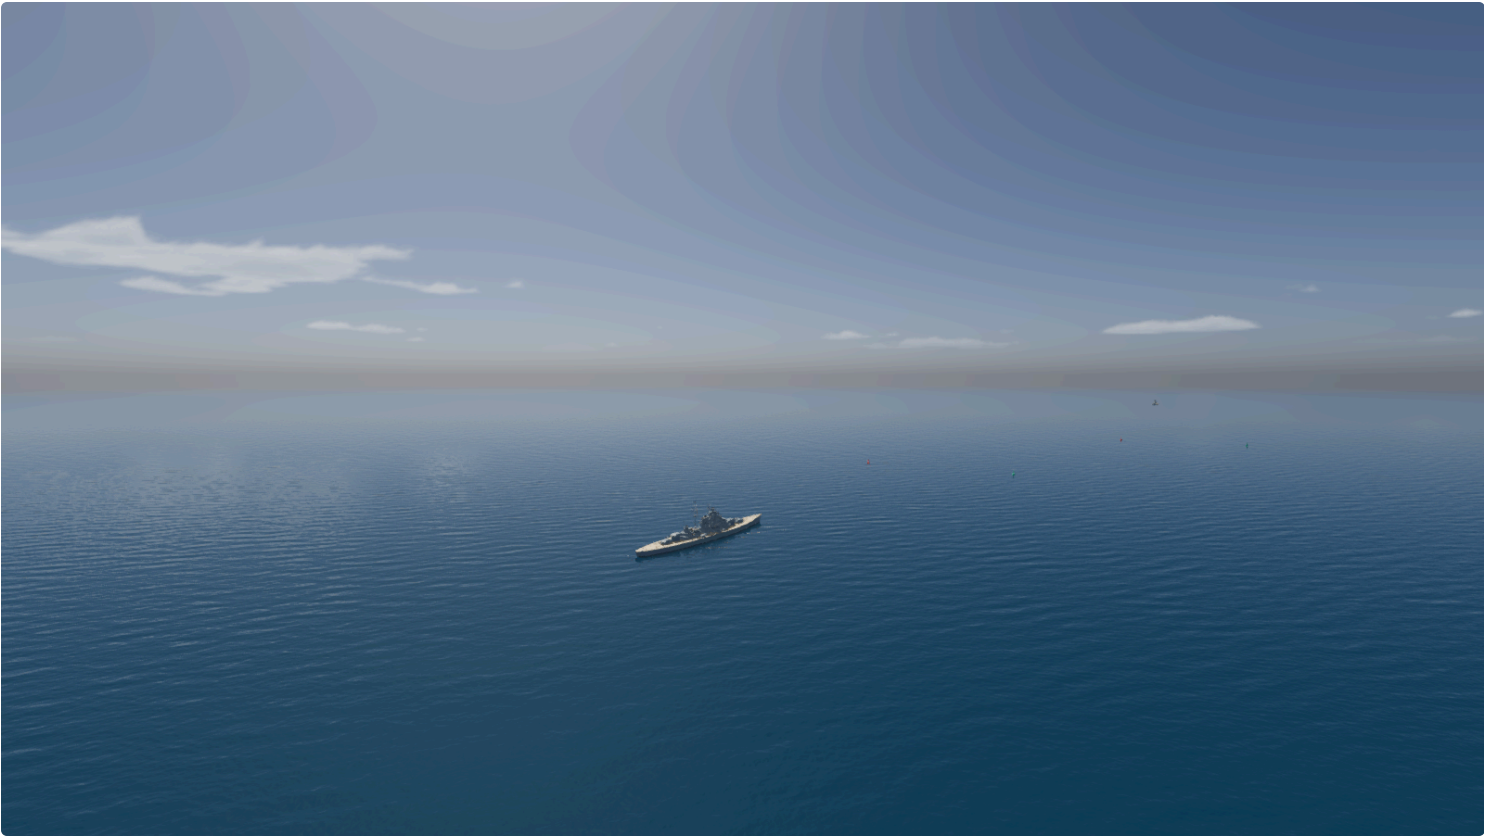

Distinct skies, smaller waves, and new coastlines for custom battles. Every image below comes from the actual game renderer.

In port, choose **Custom battle** → **Battle waters**, pick a map, then choose Fair, Moderate, or Heavy seas.

Explore the landform before / after

North Atlantic

Atlantic Ocean · Open water

Moderate seas · High quality · WebGPU · 1600 × 900 · Same camera and ocean tick across all four maps

The clearest battlefield: cool blue water, broken cloud, and an unobstructed horizon. The original smaller-wave tuning remains the reference for the other oceans.

Sun	48° elevation
Cloud shape	0.4 coverage control · 1,700 m altitude
Wave scale	28 m peak wavelength · 0.45 amplitude
Water color	■ #224659
Land	0 authored islands / headlands

Pacific Islands

South Pacific Ocean · Island waters

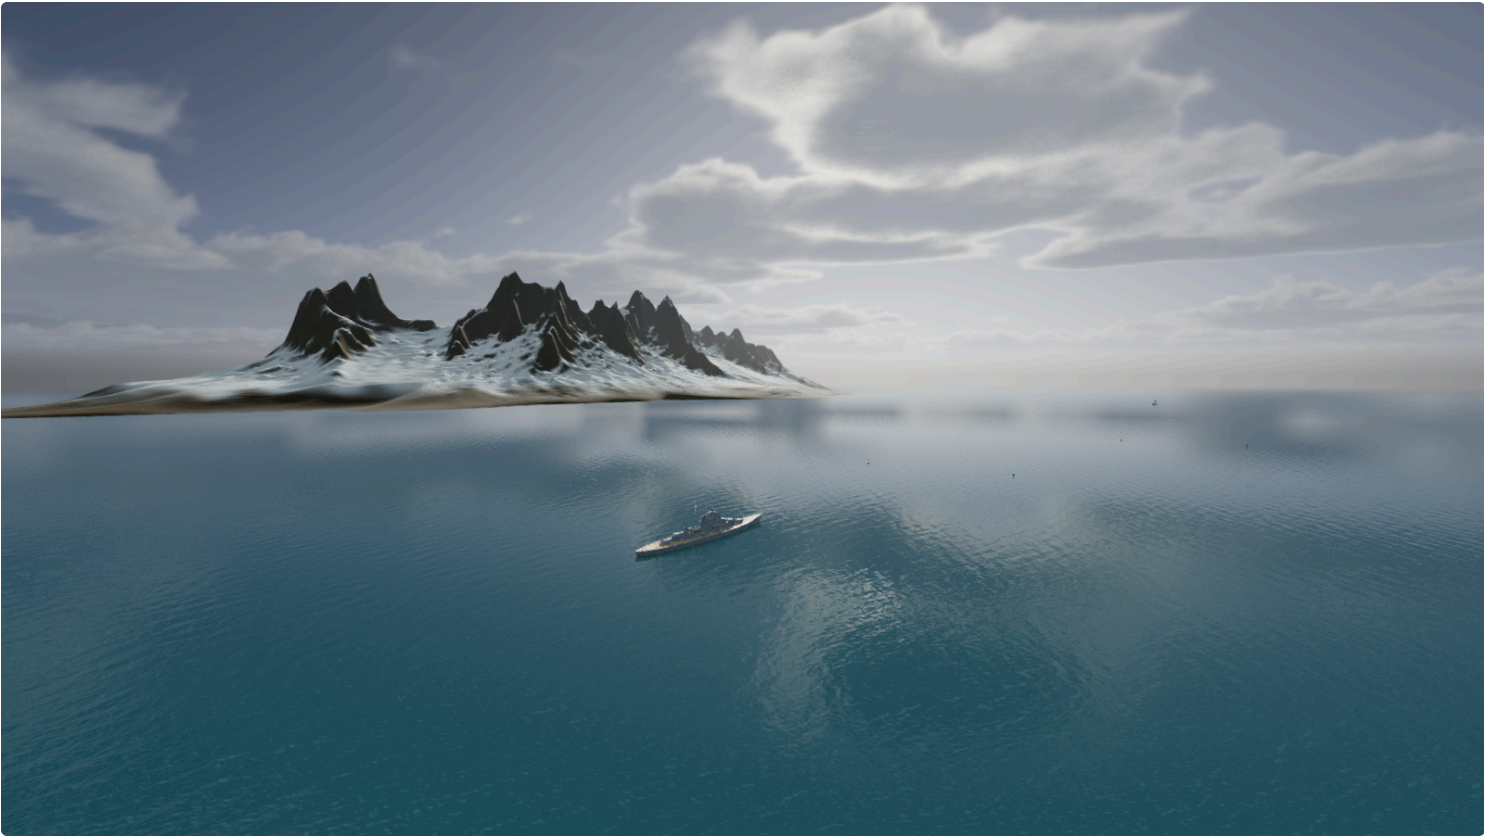

Moderate seas · High quality · WebGPU · 1600 × 900 · Same camera and ocean tick across all four maps

A high sun lights turquoise water and pale sand. Forested islands frame a broad central channel, with smaller crests keeping the sea in scale with the ships.

Sun	67° elevation
Cloud shape	0.24 coverage control · 2,100 m altitude
Wave scale	22.4 m peak wavelength · 0.2925 amplitude
Water color	#146779
Land	3 authored islands / headlands

Arctic Passage

Arctic Ocean · Snowy headlands

Moderate seas · High quality · WebGPU · 1600 × 900 · Same camera and ocean tick across all four maps

Low silver daylight, cold teal water, and heavier cloud cover give the northern passage a subdued atmosphere. Snow-covered headlands create strong silhouettes against the horizon.

Sun	18° elevation
Cloud shape	0.56 coverage control · 1,100 m altitude
Wave scale	22.4 m peak wavelength · 0.27 amplitude
Water color	#2c515b
Land	3 authored islands / headlands

Volcanic Coast

Indian Ocean · Volcanic coast

Moderate seas · High quality · WebGPU · 1600 × 900 · Same camera and ocean tick across all four maps

Dark ridges and recessed volcanic summits rise above indigo water. Lower afternoon light and atmospheric haze separate the coastal slopes from the distant horizon.

Sun	26° elevation
Cloud shape	0.3 coverage control · 2,400 m altitude
Wave scale	30.8 m peak wavelength · 0.4725 amplitude
Water color	#203f65
Land	3 authored islands / headlands

How the maps play

Each coastal map keeps a clear shipping lane for the two fleets. Larger rosters widen the lane automatically. Coastlines appear on the navigation chart; ships stop at shore and can reverse away. Bots steer away from nearby land. Low shells and torpedoes hit the coast, while shells with enough elevation can pass over it.

Sea conditions adjust the selected map's waves. Returning to port restores the sheltered harbor and its daylight. These are original, region-inspired game landscapes, not replicas of surveyed places.
